

Managing REACH: practical help for potential registrants

1 day interactive workshop

This course is a must for anyone who will be potentially registering substances under REACH. With pre-registration over this workshop examines what will happen next, how you should be planning and what is involved throughout the ongoing REACH timeline.

The workshop will address the key issues surrounding registration and hot topics such as SIEF management and communication, IUCLID5, supply chain and data sharing. With an interactive and practical focus delegates will go away having learnt from the experiences of each other and of the presenter; an expert REACH consultant working with government and industrial clients.

A practical look at the REACH-IT and IUCLID5 systems will give delegates a feel for the software and its user applications.

Topics:

- What needs to be registered – exemptions, Annex V, polymers / monomers, intermediates
- Registration process – inquiry, dossier requirements and preparation
- Substance identity and 'sameness'
- Supply chain and safety data sheets
- IUCLID5
- Annex VII – X requirements
- Data waiving
- Data evaluation
- CSA / R requirements
- SIEF management process – do's and don'ts
- Cost sharing resource requirements
- Ongoing registrant responsibilities

"The presentation was very professional, on a par with anything I have been to in the last 30 years in the chemical industry."

Cost: £295 per person

Date: Wednesday 20th May 2009

Location: Lancaster Environment Centre, Lancaster University
